

IBM Bob — MCP-Powered Retail Car Insurance Assistant

Conversational AI that turns executive questions into governed, cloud-executed business action

Current Challenge

- Tool sprawl — a one-off integration built for every new AI assistant
- Months-long time-to-market to expose a new backend API
- Inconsistent, overly technical AI responses for business users
- Fragmented security and audit controls across systems

Future Experience

- One conversational entry point — Bob understands plain-language requests
- MCP instantly exposes governed tools, no custom integration needed
- Consistent, business-friendly answers delivered in seconds
- Centralized governance via the Interact Gateway on every call

Business Outcomes

70%

Less manual effort to integrate a new backend tool

5X Faster

Time-to-market for exposing a new API as an MCP tool

Every tool call is authenticated, logged, and audited — governed AI access from day one.

Initiates a plain-language request from a local Mac desktop client
