

Leveraging IBM Bob with Instana

IBM Bob to install **Instana Server**

Demo Focus :

- Instana Server Deployment Automation

Objective:

- Simplify and standardize the installation of Instana Standard Edition on a single-node VM, minimizing manual intervention.

Automation & Workflow:

- File system preparation handled manually
- IBM Bob automates repository configuration and Instana deployment
- Bob generates scripts by referencing official IBM documentation and best practices

Outcome:

- Instana Server installed successfully
- Backend UI accessible
- Instana dashboard fully operational

Value:

- Reduced setup complexity and human error
- Consistent, repeatable server installations
- Faster onboarding without deep platform expertise

IBM Bob to install **Instana Agent** and **Deploy Application** for Monitoring

Demo Focus :

- End-to-End Infrastructure, Application, and Agent Automation

Objective:

- Demonstrate automated provisioning, application deployment, and observability enablement using IBM Bob

Automation & Workflow:

- Terraform scripts generated to provision IBM Cloud VSI and install k3s
- Ansible playbooks generated to deploy a microservices-based application
- Instana Agent deployed automatically on the k3s cluster
- Bob enables review and refinement before execution

Outcome:

- Cloud infrastructure provisioned successfully
- Application running on k3s
- Instana Agent visible with telemetry and tracing data

Value:

- Accelerated delivery with standardized automation
- Reduced manual effort and configuration overhead
- Complete visibility from infrastructure to application

AI-Driven **Self-Healing Applications** powered by IBM Bob and **Instana**

Demo Focus :

- AI-Powered Observability and Self-Healing Applications

Objective:

- Enable automatic instrumentation, intelligent observability, and faster issue resolution across applications.

Automation & Workflow:

- IBM Bob applies AI-driven instrumentation during development
- No manual configuration required for monitoring or tracing
- Instana provides AI-assisted anomaly detection and root-cause analysis

Outcome:

- Monitoring and tracing embedded automatically
- Early detection of performance and reliability issues
- Faster troubleshooting with correlated insights

Value:

- Reduced MTTD and MTTR
- Faster SDLC and time to market
- Improved reliability with minimal operational overhead
