

Data Insights Accelerator using IBM Bob

Drop any .xlsx file — Bob automatically analyses the data, scaffolds a full Node.js web application with interactive charts and dashboards, and integrates an IBM watsonx.ai (Granite) chatbot to answer natural-language queries about your data. Zero manual code. Zero configuration.

Current Challenge

- Teams spend hours manually extracting insights from raw Excel files
- No consistent structure or format across reports
- Slow feedback loops delay data-driven decisions
- Key metrics buried across hundreds of rows and sheets
- No interactive exploration — static exports only
- Zero AI assistance for querying or interpreting data

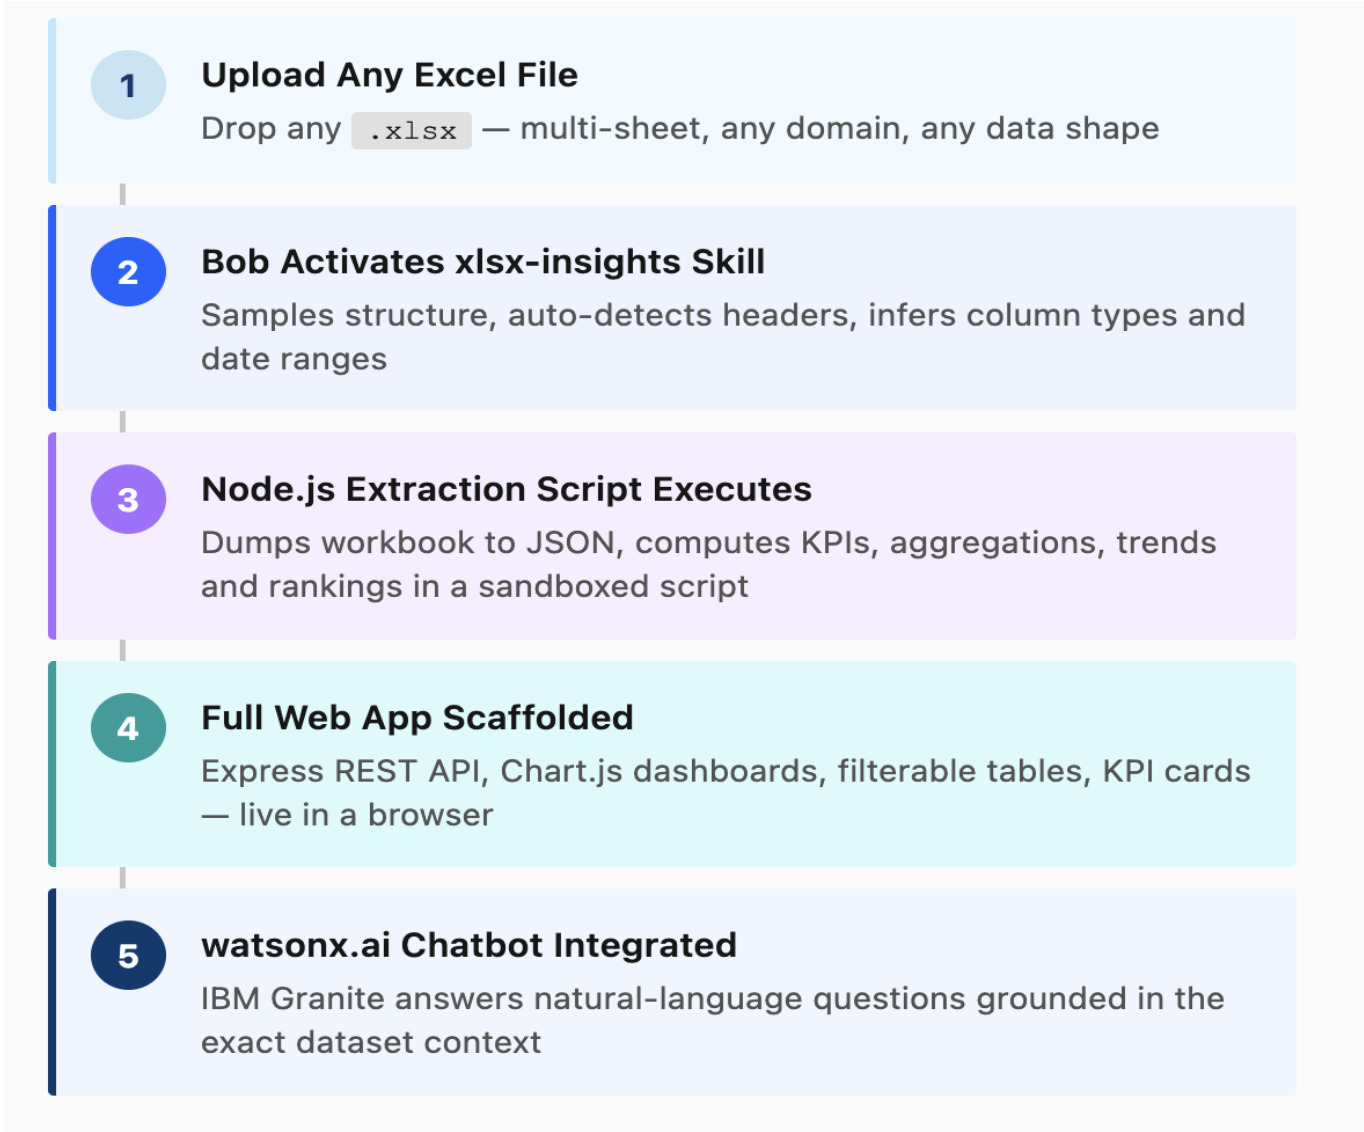

Team

Pratham S Shetty
Preethi Mohan

Future Experience

- Turn raw files into interactive dashboards in under 10 minutes
- Ask questions in plain English and get instant insights.
- Automatically generate KPI cards and interactive charts.
- Instantly compare trends across periods and channels.
- Detect anomalies and uncover actionable recommendations.
- Analyze any spreadsheet with zero configuration.
