

Lakehouse Copilot

Enterprise AI Copilot for Your Lakehouse

Talk to your data. Instantly. No SQL required.

THE PROBLEM

Data is powerful — but still hard to access

Data access bottleneck

Business Users depend heavily on data teams.

Fragmented data experience

Existing tools are not intuitive or conversational.

Slow data setup

Creating test/sample data takes time.

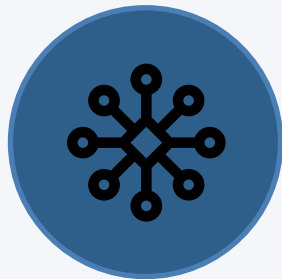

Technical skill barrier

SQL and schema complexity slow down insights and decision making.

Lakehouse Copilot: Conversational AI for Data

Create tables with synthetic data instantly

Auto-convert queries to SQL

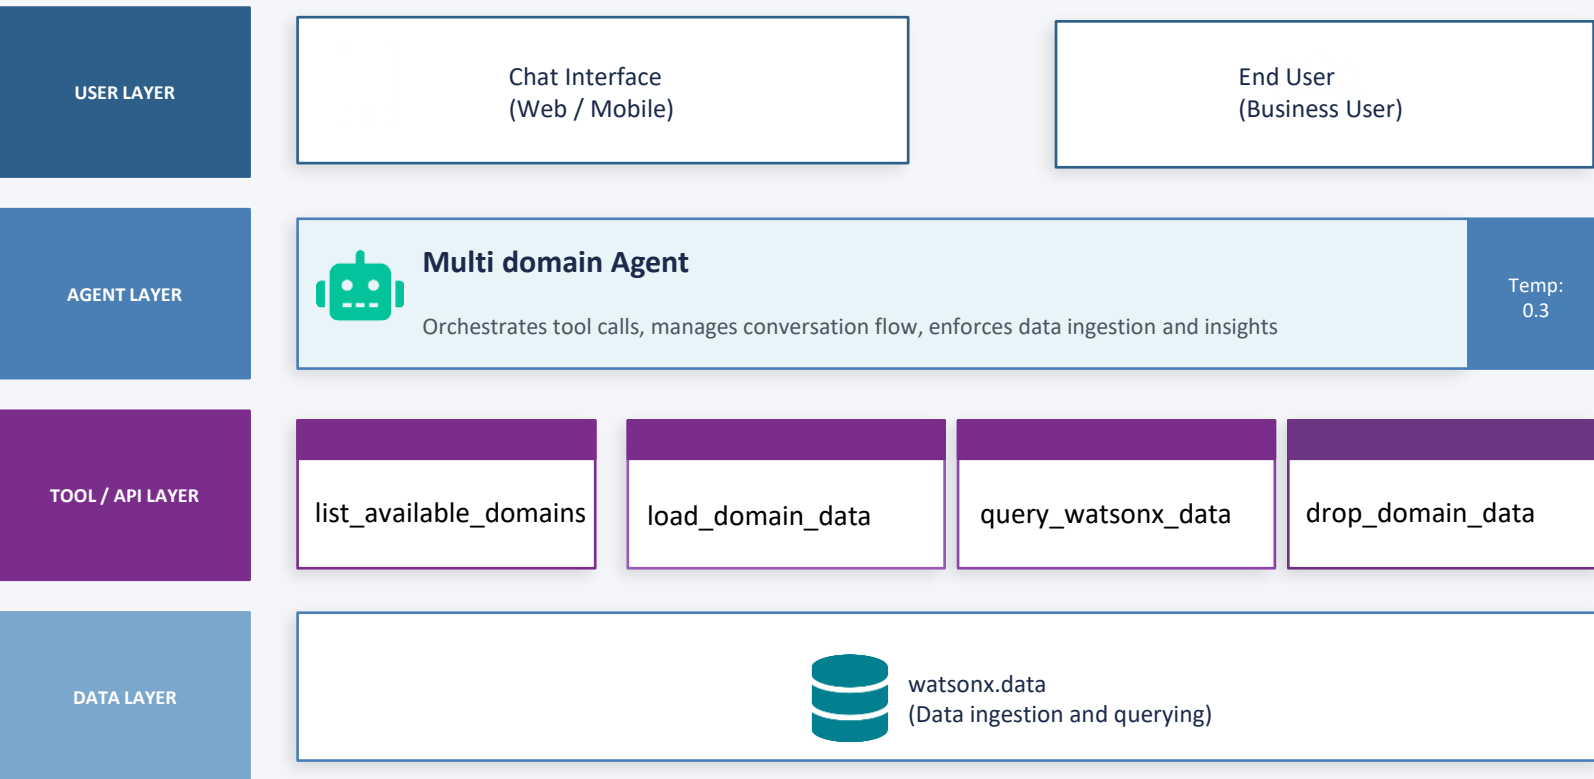

Lakehouse
Copilot

Query data using natural language

Fully integrate with
watsonx.data

SOLUTION ARCHITECTURE

How it works?

What Lakehouse Copilot enables

Conversational querying

Ask Questions in plain English

Instant Data setup

Generate realistic synthetic datasets

Automated SQL generation

No manual SQL query writing

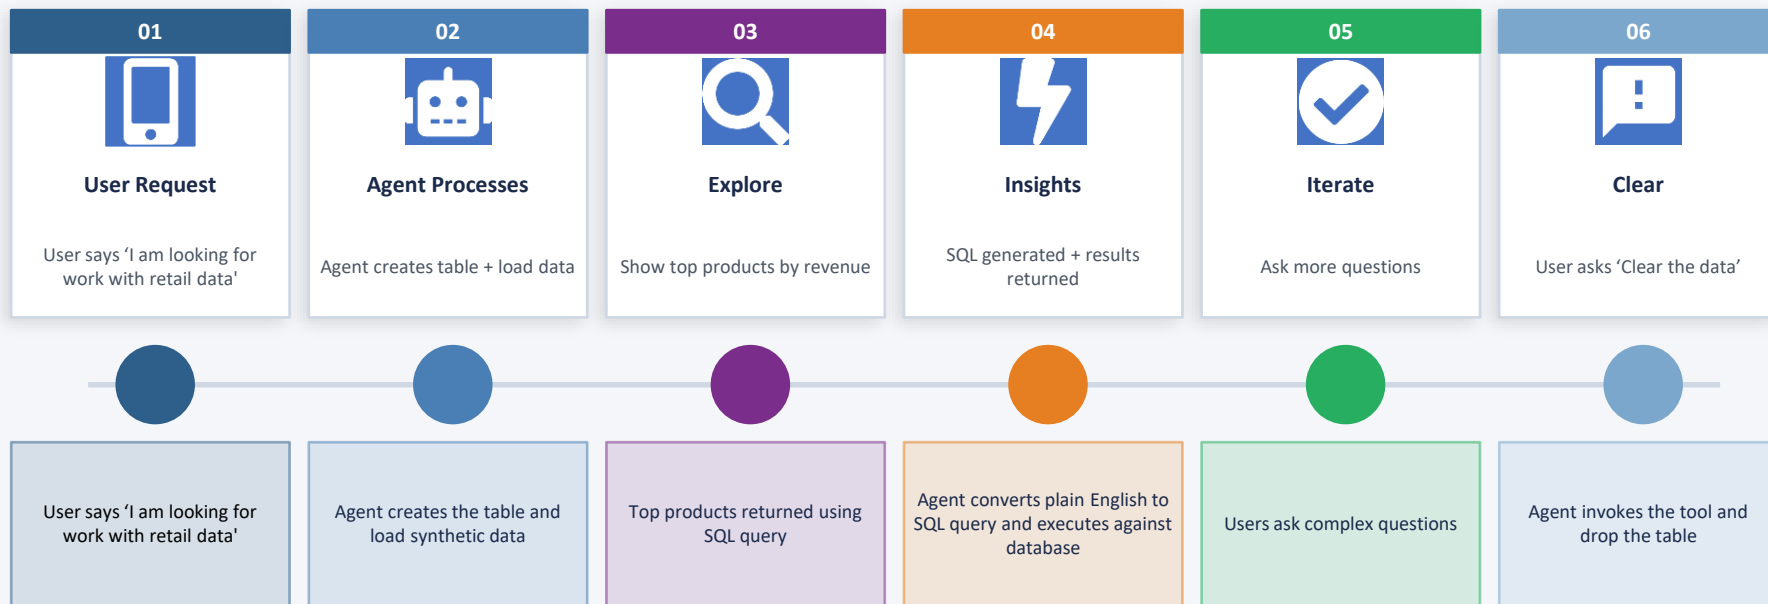

Full Data Lifecycle

Create, query and delete seamlessly

USER JOURNEY

From questions to insights — in seconds

Available domains include Finance, Retail, Insurance and Supply chain

Real conversations Lakehouse copilot handles

S1 Data Setup

User: *"I need to work with retail data"*

Agent:

Creates retail table and ingest 500 sample rows, recommends sample queries

S2 Business Query

User: *"Show me monthly revenue trends"*

Agent:

Converts English to a logical SQL query, calls in Presto API to query the database and generates results

S3 Deep Dive

User: *"Which region performed best over those months?"*

Agent:

Agent remembers the previous context, converts English to a logical SQL query, calls in Presto API to query the database and generates results

S4 Cleanup

User: *"Clear the data or drop the table"*

Agent:

Drops the table and notifies the user

Measurable outcomes for operators and users
