

Play your Asset Ace

Self-service KYC assistant

Business Challenges

- When a user requests to open a bank account, Know your customer (KYC) needs to be done to identify customer risk.
- Front office, mid office and back office spend manual efforts on identifying the customer and creating customer risk profile and performing extended due diligence.

Value Proposition

- Extract PII from the uploaded documents accurately with multi-modal LLMs.
- Efficiently generate a detailed report for customers risk profile including adverse news, PEP, extended due diligence, etc

Technology Stack

- watsonx Orchestrate
- watsonx.ai

Asset Highlights

- Document extraction workflow: Deterministic agentic workflow to extract PII from Aadhaar, DL & PAN cards. (can be extended to other documents)
- CDD risk profile: AI Agent reasons through to perform customer due diligence and provides report
- EDD risk profile: If CDD is flagged high risk, extended due diligence is performed automatically.

Benefits

- Front office job such as application submission and identifying customer can be easily done by the agentic workflow.
- Mid office job such as identity verification customer due diligence and extended due diligence can be handled by agent's reasoning.

Why IBM

- Open IBM's AI is based on the best open technologies available
- Trusted IBM's AI is transparent, responsible, and governed
- Targeted IBM's AI is designed for enterprise and targeted at business domains
- Empowering IBM's AI is for value creators, not just users
