

Vulnerability Intelligence and Runtime Observability

Solution Architecture - IBM Concert & Instana Better Together with IBM Bob

AI-powered automation for vulnerability management, root cause analysis and remediation

End-to-end solution Value proposition

Automated SBOM generation

By taking required details from vulnerability scan reports, ConcertDef schema-compliant Application SBOMs (v1.0.2) is generated

Easy ingestion to IBM Concert

Uploads Application SBOM and Vulnerability scan reports to Concert.

Risk prioritization

Concert analyzes CVEs and prioritizes what needs to be addressed immediately

Auto remediation

IBM Concert provides recommendations for remediation of CVEs.

Single pane of glass view

IBM Concert and Instana integration provides unified view of vulnerabilities & runtime metrics.

Business impact assessment

Application owners can quickly understand business impact using the consolidated views.

AI assisted RCA

By analyzing application metrics received from Instana MCP server, IBM Bob provides root cause analysis.

Accelerated remediation

By providing required platform access and approval IBM Bob can be used to take remediation action.
