

Intelligent IBM API Connect Modernization

AI-Powered V5→V10 Migration using IBM AMU + IBM BOB on CP4I

Current Challenge

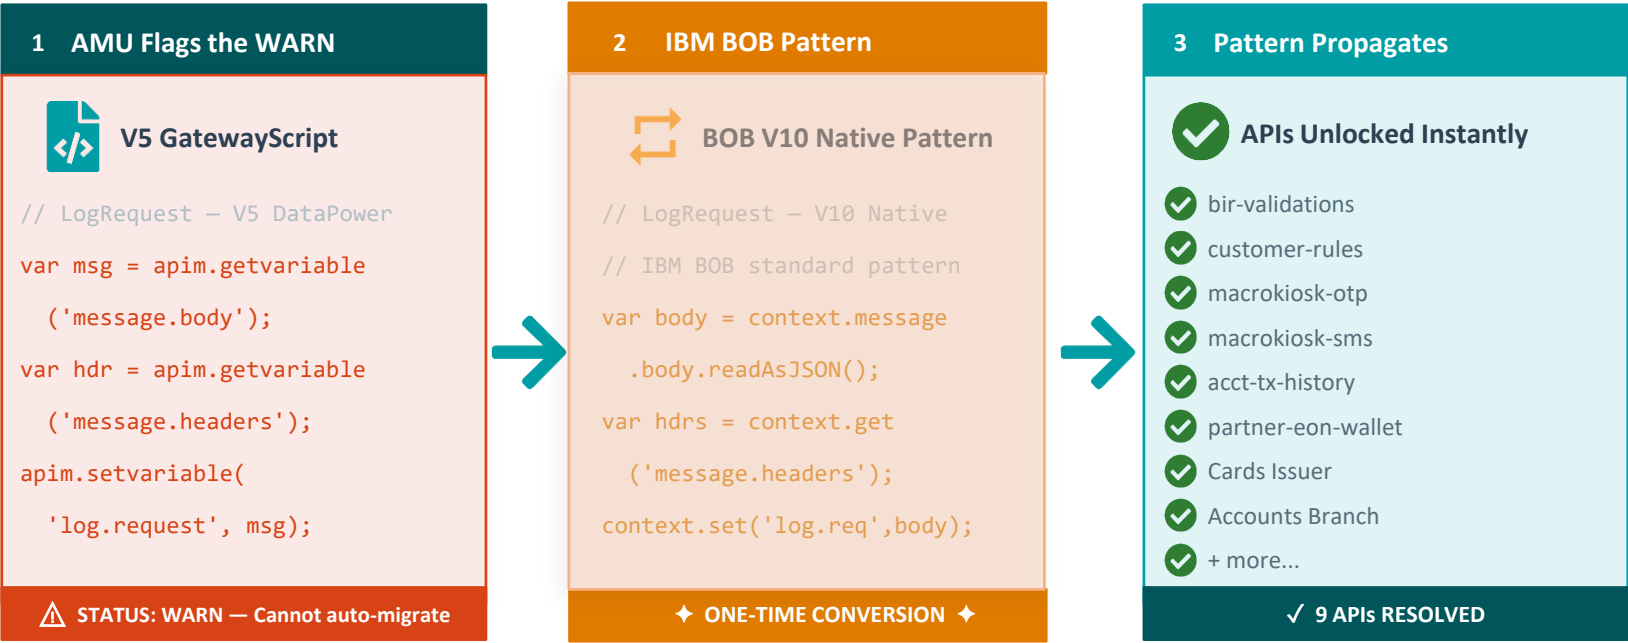

- IBM AMU flags the same GatewayScript WARNs across all 10 APIs — V5 patterns cannot auto-migrate
- Manual rewriting of each API is slow, error-prone and costly — LogRequest WARN alone affects 9 of 10 APIs
- No systematic approach to propagate fixes across APIs sharing identical patterns

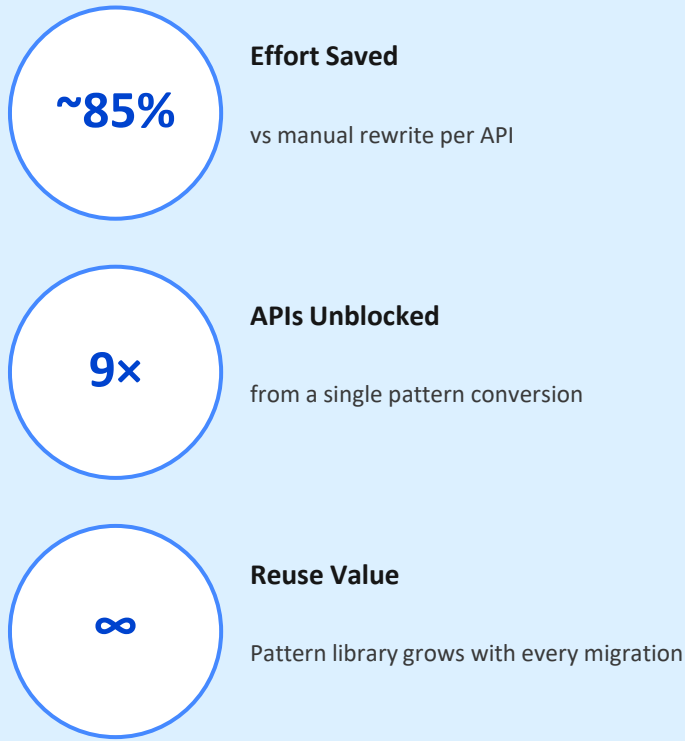

Future Experience

- IBM BOB converts each unique GatewayScript pattern once into V10 native GatewayScript — propagated instantly across all APIs
- LogRequest & LogResponse converted once → 9 APIs unblocked; 4 key patterns resolve 100% of WARNs
- Pattern library grows with every migration cycle, compounding ROI across future projects
