

Autonomous Threat Remediation¹ with Agentic AI

Insider Threat – the Industry Problem

Anyone can be an insider

14%

credential theft

23%

criminal insider

62%

negligence

80%

involve privileged
credentials

Insider threats are hard to
contain

77

Average number of days
to contain each insider
threat incident

87%

Take more than 30 days
to contain

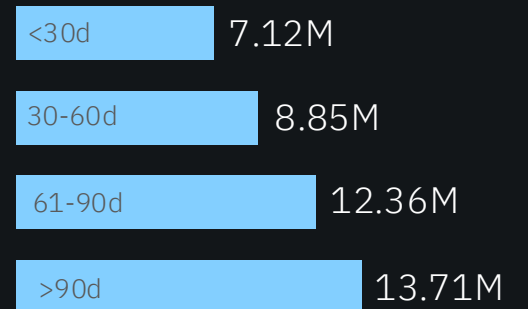

And it comes at a cost

\$644K

Cost per insider
threat incident

\$11.5M

Average annual cost
for responding to insider
threat-related incidents

Data Protection - without AI Agents

Manual Partially Auto Auto

8. Prevention Update

The measures to prevent the same are updated in the workflow.

6. Control Layout

The mitigation controls are laid out.

4. Investigation

The SOC analysts starts the investigations immediately.

2. SOC Alert

The system alerts the incident to a Security Operations Center.

7. Control Implementation

The controls are implemented by the relevant product admins and/or App Admins.

5. Log Analysis

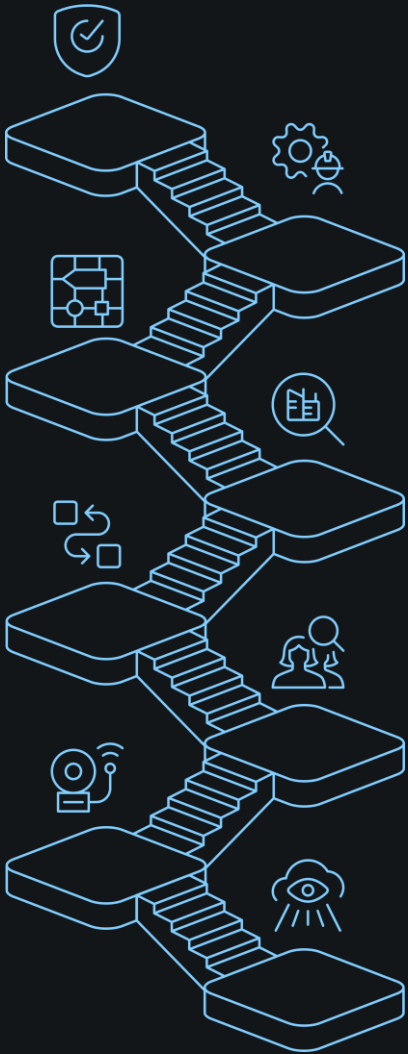

Logs from Application and security products are analyzed and correlated.

3. Workflow Trigger

A workflow is triggered involving the necessary product teams (Snow/JIRA).

1. Threat Detection

Data Activity monitoring identifies a threat of accessing a critical data.

Risk

- Human errors, not always accurate
- MTTR is high
- Deterministic Rules, less adaptive

Business Impact

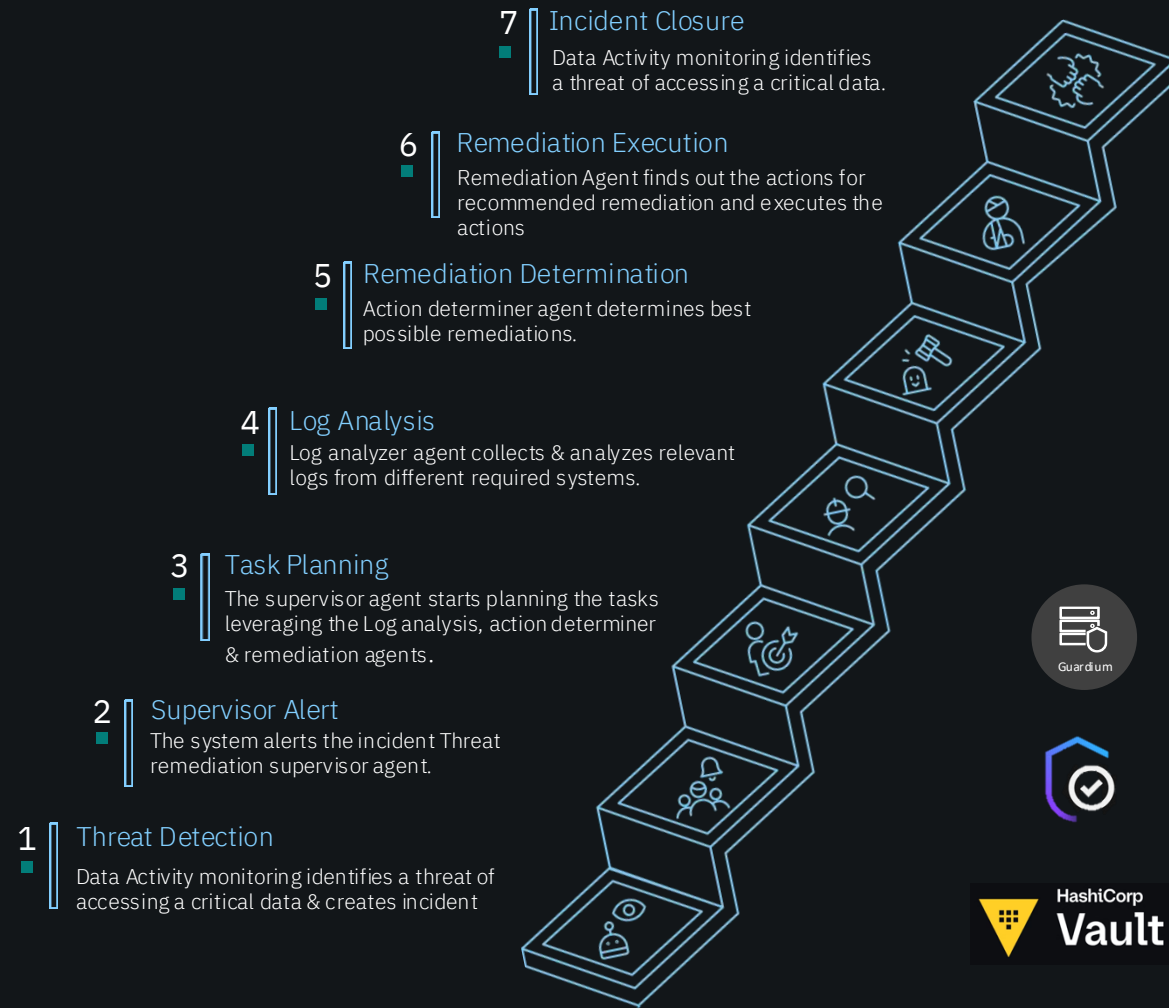

- Application availability and Business continuity
- User Data compromise and compliance problems
- Brand Reputation and Revenue loss

Data Protection - with AI Agents

Powered By

IBM watsonx
Orchestrate

IBM Guardium Data Protect (GDP) to monitor Database activity

IBM Verify to authenticate & authorize Human/machine users

HashiCorp Vault to protect access to privileged systems

Outcomes

- Drive SOC excellence through Agentic-AI
- Enables auditable, explainable security operations
- Scale Gen-AI based security operations
- Improves overall efficiency

Benefits

- Data breach containment
- Improves risk management
- Enhances business continuity
- Protects brand reputation
- Seamless human collaboration for decision making

Powered By:

- Watsonx Orchestrate for Agentic Automation
- IBM Guardium Data Protect (GDP) to monitor Database activity
- IBM Verify to authenticate & authorize Human/machine users
- HashiCorp Vault to protect access to privileged systems
